

# LiPo Fires

## When to be cautious

- The battery is old (over 250 charging cycles)
- The battery is bulging
- The battery is hot

## When to take action:

- The battery is making a hissing noise
- The battery is ballooning heavily
- The battery is emitting smoke

LiPo fires cannot simply be extinguished

Do not touch! It can burst suddenly

Bury the LiPo with sand

Be ready to extinguish the surroundings

If a fire starts, **evacuate** the building,

the fumes are toxic!
